### ANNOTATION

*After independence, the process of globalization began to enter our daily lives very quickly. The main reason for this is that today the development of any state is so closely linked not only with its neighbors, but also with other regions of the world, that any state is left out of this process. It is not difficult to understand and comprehend that it does not lead to any positive results, that life itself shows.*

**KEYWORDS:** *ideology, educator, student, globalization.*

In the long history of its development, our people have experienced a number of hardships and expressed their potential in society through the rise of science, art and culture, the achievements of great figures in their work.

Ideology (Arabic - a set of ideas) - a system of views and their implementation, which expresses the interests, dreams, goals of a particular social group, class, nation, society, state. It reflects the past, present and future of the groups and strata whose interests are represented. It is necessary in the life of any society. There have been various ideologies in human history. Ideological leaders, thinkers and leaders of different nations and social forces have developed ideological doctrines and programs based on their own interests and goals.

In any ideological society, the needs of the emerging socio-political forces emerge as a new ideological system that expresses its goals and, in principle, sets itself the following tasks: to inculcate a particular idea in the minds and psyche of the people; integration of different groups of the population; mobilizing people to achieve goals and objectives; to motivate them spiritually; ideological upbringing of the population, especially the younger generation, and the formation of ideological immunity; protection from other ideological and ideological influences and urban.

Speaking about the various attacks on spirituality in the context of globalization, the President of the Republic of Uzbekistan Sh. Mirziyoyev said: The deeper meaning and significance of these words will become even clearer. ”

The national spiritual and moral foundations of the human heart and mind constantly encourage him to be honest, clean, educated, to serve the people, to contribute to the development and progress of the Motherland, to develop as a conscious and free observer. As the first President IA Karimov said: "... It is the duty of all of us as fathers and mothers to bring up our children on the basis of our national and universal values, as patriots with their own ideas and modern knowledge." Therefore, the main task of all levels of education today is to educate and bring up young people who are the future of our country at the level of modern requirements, to raise them to a high level of spirituality, to withstand any negative influences, because only such young people can build a just society in the future.

In today's fast-paced world of globalization, faith and ideological immunity cannot be borrowed from markets or acquaintances. Beliefs are nurtured, and ideological immunity is formed. The role of faith

in society and in human life is very important. There is a saying among our people that "a man without faith is a river without a river". Because everyone has and should follow certain views and beliefs in their social and personal life, in their activities. Without faith, a person cannot be independent and creative in doing anything. Belief is, in our opinion, a set of ideas and views that people sincerely follow and support in their activities, and they are the essence of the worldview that is formed in the human mind under the influence of the conditions in which he works, lives and time. Faith is an important component.

In his Address to the Oliy Majlis on December 28, 2018, President Sh. Mirziyoyev said: "... we need to further improve the system of science, modern and continuing education. There is a wise saying among our people: "Education and upbringing begins in the cradle." Only enlightenment leads a person to perfection and society to development. Therefore, public policy in the field of education should be based on the principle of a system of continuous education, that is, education should begin in kindergarten and last a lifetime.

In conclusion, if we want to educate young people in the spirit of love for the motherland, respect for our rich history, we must first strengthen the ideological immunity in their hearts and minds. So that young people can understand their national identity, and at the same time become people who have a deep understanding of the world and keep pace with the times. To do this, we must first instill the national idea in the hearts and minds of young people through all the social sciences and humanities.
